Incidental findings in cancer patients: extraabdominal organs and kidney

RöKo International Mittwoch, 24.05.2017 von 17:00 bis 18:20 Uhr im Raum: Donner

Kurzfassung: Incidental findings in the lung of a patient with known malignancy may represent a manifestation of the underlying cancer, complications of the disease or its therapy or may be completely unrelated. Even significant unrelated disease may require a completely different approach depending on the stage and grade of the known malignancy. This presentation will focus on the management of different incidental pulmonary findings in cancer patients.

Lernziele: 1. Strategies for the management of incidental solid pulmonary nodules in cancer patients
2. Strategies for the management of incidental subsolid nodules in cancer patients
3. Strategies for the management of consolidation and ground glass opacities in cancer patients
4. Understand the role of multidisciplinary team meetings in the management of incidental findings in individual cancer patients.
